

# D-8800

## GRAPHICS GENERATOR COMPUTER INTERFACE

### BEST OF BOTH WORLDS

This combined Hardware and Software option marries the 'number crunching' and mass data storage capabilities of your computer with the high resolution, raster scan color graphics of the D-8800. All standard D-8800 features are included and can be used in either the manual or remote control mode.

---

#### Features:

- RS-232 Serial (300-4800 BAUD) or 8-bit Parallel Interface.
- Full control of message composition, recording, playback and Dynamics.
- Single-code text editing features (to Center and Right/Left Justify by row or page) and ten setable tabs are available so that maximum advantage of the Proportional Spacing can be taken with minimal programming effort.
- Full operational interface to TELESOURCE time share services, for news, sports and election coverage.

#### Typical Applications:

Host computers can be programmed to automate message composition or to synchronize playback with other events in a production. Examples are:

- ELECTION RESULTS can be covered in a variety of ways...Display up-to-the-minute results for a single race by updating it right on the air...Dump many races to pre-determined disc page addresses for later instant (and random) recall...Display a sequence of race results under complete control of the host computer...etc.
- 'SLIDE' PRESENTATIONS can take on a new dimension when your data is presented graphically using the D-8800 'LINE SEGMENT' font and the ROLL, CRAWL and Animation features are used to add punch.
- CURRENT STATUS of such things as class schedules, work in progress, inventory, etc. can be displayed in easy-to-read high resolution displays.
