

WEATHER PACKAGES

MagicBox Aavelin Digital Signage and Video Messaging System

Providing up-to-the-minute information attracts viewers to your channel. With the weather packages available for the MagicBox Aavelin, display of current conditions and trends as part of your presentation is easy, attractive, and reliable.

Adding live weather display to an Aavelin system is easy – the supplied instruments for wind, temperature, and rainfall (and optionally, barometer and humidity) are connected to a LCD display terminal which combines all the signals into one data feed which is run to the Aavelin playback system.

In Aavelin Composer, you can specify where weather shows up on the page, for how long, and even have it crawl over existing pages or live incoming video with the Aavelin RT.

With Aavelin's smart refresh feature, weather information updates continuously on the screen – if you have specified that the wind should be displayed for ten seconds, the wind speed and direction values will update on the screen in real-time – multiple updates during that ten second period. Continuously updating weather data holds viewers' attention and creates a live, up-to-the-minute feeling.

The Aavelin player will also track weather values such as high and low temperature, high wind speed, monthly rainfall, and it will also calculate wind chill as well as dewpoint and barometric trend with the deluxe weather package.

- Standard package senses temperature, wind speed, wind direction, rainfall.
- Deluxe package adds barometric pressure and humidity sensors.
- Real-time screen updates of live weather data.
- Flexible display options – stationary or crawling, solid background or page overlay.

Contact MagicBox today to discover the Weather Display Solution that's right for you.
